

Micro Balance™

Acts fast to replenish key components of the normal equine digestive system

- Fast-Acting, Immediate Care Paste

Great Things Come in Small Packages The well being of even the biggest and strongest horses depends on some very small packages—the beneficial microbes and yeasts that thrive in the healthy gut. These organisms co-exist with the horse in a classic symbiotic relationship in which both the ‘host’ (the horse) and the ‘guests’ (the microbes and yeasts) depend on each other for their mutual survival.

Microscopic Nutrient Factories Veterinary researchers report that this natural symbiosis in the horse’s hind gut provides a variety of nutritional advantages. Unlike the horse’s own digestive processes, intestinal microbes are able to break down cellulose, the tough fiber that makes up the plant structure of forage, hay, and grain. Microbes release the products of their cellulose digestion as volatile fatty acids, which the horse absorbs and uses as a major source of aerobic energy. Beneficial microbes also produce large quantities of B complex vitamins and may make a substantial contribution to the horse’s overall B vitamin nutrition. For example, unsupplemented feeds contain essentially no vitamin B₁₂; horses rely on intestinal microbes to produce this essential vitamin for them.

No Vacancy Perhaps the most immediate benefit of normal microbial and yeast colonies is the way they help increase the amount of microbial activity of the intestinal environment in the cecum and large colon. Thus, the first sign of the collapse of the beneficial colonies is often a rapid increase in the activity of *E. coli* and other pathogens, typically accompanied by symptoms ranging from loose stools to full-blown scours.

Unprecedented Results, Guaranteed Unlike so-called ‘probiotic pastes,’ Micro Balance™ provides a broad-spectrum complex of beneficial direct-fed microbial and yeast cultures. Thanks to its global approach to replenishing the full array of ingredients required by healthy colonies, Micro Balance™ produces much faster results for horses of all ages. In fact, if you don’t think Micro Balance™ is the fastest equine microbial support system you’ve ever seen, we will refund your purchase price in full. That’s how impressed we have been with Micro Balance™ for the immediate care of foals, weanlings and adult horses in a variety of situations.

Immediate Care Solution Whether you deal with the uncertainties of breeding and raising foals or with the sudden problems brought on by heat stress, dehydration, and exhaustion during traveling and performance, you’ll find Micro Balance™ to be one of the handiest tools in your horse care arsenal. Simply squeeze the contents of the tube into the back of the horse’s mouth. For extra protection during periods of stress, use the handy dose dial to measure a small daily maintenance dose

Directions for Use For immediate care: Give 5 to 10 ml per 100 lbs body weight. For most adult horses, give entire contents of tube. Recommended maintenance: Give 1 ml per 100 lbs body weight per day. See package for complete instructions.
