Medium Hard	MH	Light Blue
Lite		Light Green

Lays Available

Headers 30' XXS,XS,S,MS
 Heelers 35' MS,M,HM,MH

Most Popular

XS,S
 MS,M

Effects of weather:

Cold weather relaxes fibers causing ropes to soften. Hot weather tightens fibers causing ropes to harden. Try a softer lay for warmer weather and a firmer lay for colder weather.

Importance of buying in season:

Because weather changes affect ropes, weather dictates the way ropes are manufactured. The amount of twist put into ropes and the kick (the amount that the rope pushes out at the bottom) are adjusted for different seasons.

Proper Break-In:

Give a rope 3 stretches and roll it up to set for 24hrs before next use.
