

TIPPERARY RETENTION SYSTEM FACTS AND FEATURES

- Large, inexpensive dial fit systems cannot compare to the Tipperary Retention System. The Tipperary system is discreet and does not interfere with the overall design of the Royal helmet.
- The 360° retention system on all new Royal helmets is fully adjustable and wraps your head for an exceptionally comfortable and custom fit. Once securely adjusted, the helmet outer-shell can move independently dispersing energy from head impacts.
- The Tipperary Retention System was designed to accommodate various head shapes and can be adjusted for those riders who wear their hair inside the helmet or down.
- The system is made from an ABS substrate finished with silicone to resist/repel sand and dust particles that are often found in the barn.
